

Advance2000 has again revamped the virtual desktop experience. Our VSAN Enhanced vGPU allows even the most demanding applications to work flawlessly. Advance2000 is now offering VSAN as an upgrade option to its VDI clients. VSAN Enhanced vGPU Desktops improve performance and provide built in redundancy making desktops more stable, secure and fail-proof.

FEATURES AND BENEFITS

- Better Performance using Flash Storage
- Built in Redundancy
- High Performance Backup Snapshots
- More scalable than traditional SAN
- Built in Load Balancing
- Improved Capacity Monitoring & Planning
- Enhanced Health & Performance Monitoring

FASTER VDI PERFORMANCE

Local storage and Solid State Drives provides the best end user experience to date. This is critical for demanding applications such as AutoCAD or Revit.

BUSINESS CONTINUITY / DISTRIBUTED STORAGE

vSAN creates a mirror copy of a user's desktop in another location which provides enhanced business continuity. In the event a primary desktop is lost, the user will quickly be redirected to the mirrored desktop.

IMPROVED HEALTH MONITORING AND REMEDIATION

vSAN provides better visibility into a client's VDI environment to ensure problems are quickly discovered before the end user experiences any problem.
